
Steripen Traveller

Buying bottled water abroad might be safer than drinking from taps or mountain streams, but it's hardly an eco-friendly option. The pocket-sized Steripen Traveller lets you enjoy the flavour of local water without any of the viruses, bacteria or protozoa that might be lurking inside. It uses ultraviolet light to disinfect half-a-litre of water in under a minute. It's light, tough and runs on two rechargeable batteries – for which you can even buy a solar charger (£50). The ultraviolet lamp has a healthy lifetime too – you can sterilise four litres of water every day for seven years before it needs to be replaced.
